EQUINE TREADMILL

A professionally engineered galvanised steel equine treadmill with variable speed and incline to enable the development of strength, flexibility, stamina and balance.

Ideal for private and livery yards or equestrian centres.

"We had no room for a horse walker so the treadmill is ideal. It is very easy to use and has hugely benefited all our horses' fitness levels, topline and general muscle tone. It has also been great for injured horses needing controlled walking exercise in straight lines."

Yazmin Pinchen, Young Showjumper.
